

Wisconsin Community Services

Wisconsin Community Services, Inc. (WCS) is a 501(c)3 non-profit service agency that has worked with high-risk individuals both inside and outside of the criminal justice system since 1912. WCS operates over 40 programs throughout southeastern Wisconsin (including Milwaukee, Waukesha, Sheboygan, and Kenosha Counties). WCS employees serve thousands of people each year.

WCS Mission

WCS advocates for justice and community safety, providing innovative opportunities for individuals to overcome adversity.

WCS Drug Testing Services

WCS Drug Testing Services offer a complete menu of laboratory-based and rapid substance abuse testing options designed to meet the needs of clients referred through the criminal justice system, workplace testing programs, and for personal needs.

WCS is committed to maintaining service standards consistent with the latest research and leading-edge technology. WCS partners with laboratories that are certified by the industry's most prestigious regulatory bodies.

Rapid Urine Drug Screening:

- WCS utilizes a 6-panel and an 11-panel rapid test which gives accurate results within 10 minutes.
- If a rapid drug test shows a positive result, the client has the option to have the test sent to our partner lab for confirmation (\$25 per substance).

Urine Drug Testing - Lab-Based:

- The urine specimen is collected by a certified professional collector at WCS, abiding by industry standards to maintain the integrity of the process and the confidentiality of the client.
- The specimen is sent to a nationally certified laboratory for analysis.
- A certified scientist signs off on each drug test result to ensure accuracy and makes sure that the correct procedures were followed for legally defensible results.

Oral Fluids Drug Testing - Lab-Based:

- Oral fluid testing offers non-gender specific specimen collection. Testing can detect drugs within 10 minutes of ingestion.
- Oral fluid testing analyzes a saliva sample for drugs and their metabolites.
- An absorbent collection device is placed in the mouth and the saliva collected is screened for drugs of abuse.

- Samples are checked to verify the saliva is human and undiluted.
- The collection device is sent to our partner lab for results.

Hair Drug Testing - Lab-Based:

- Hair testing measures the drug molecules embedded inside the hair shaft.
- The non-intrusive collection of the hair sample, along with the inability of donors to adulterate or contaminate the specimen, make hair testing a desirable option to other drug testing methods.
- Hair testing provides a longer history of drug exposure (0 to 90 days) than any other testing method.
- The collected hair specimens are sent to our partner lab for analysis.

General Testing Information

- A release of information is obtained from the client and results are **ONLY** released to the requesting party, unless otherwise specified.
- A client can be tested **RANDOMLY** as requested and/or as often as requesting party prefers.
- Depending on the type of drug test chosen, results are faxed or e-mailed within one to six business days.
- Depending on preference of the requesting party, testing can be monitored or directly observed (for an additional fee).
- Services can be customized to meet the needs of a specific client.
- Staff are specially trained in current collection techniques.
- Cash and credit cards are accepted at the time of test.

BY APPOINTMENT ONLY; NO WALK-INS.

For additional information, questions about testing services, or how to set up an account, please contact Michael Balda at 414-759-5387 or mbalda@wiscs.org.
